

AusACPDM Listening and Sharing session

“First Nations cultural adaptation of the LEAP-CP early Screening Program”

Join us in our free listening and sharing session

31st August at 4.30 pm Australian EST

The aim of our AusACPDM Listening and sharing sessions are to share our experiences and learnings on the cultural adaptation and delivery of an early screening program for Aboriginal and/or Torres Strait Islander infants at risk of adverse neurodevelopmental outcomes in Queensland .

Topic information: Early screening programs can identify infants who are ‘on track’ with their development and those who require extra support to grow strong. The LEAP-CP early screening study is a culturally adapted program embedded in hospital services in North QLD and aims to offer First Nations babies and families early movement and learning checks over the first year of life to support infant development. The cultural adaptation and modification of the screening program utilises a participatory action research model involving community consultation and engagement, targeting key components of cultural safety and sensitivity, consultation and co-design, capacity building and sustainability. This session may be of interest to clinicians and researchers working with Aboriginal and Torres Strait Islander infants and families.

Speakers: Leanne Mick-Ramsamy, Carly Luke
The session will be facilitated by: Prof Ros Boyd
