

Are you a medical or allied health professional currently working with young people with cerebral palsy?

We are recruiting healthcare providers who have experience in providing care to young people with CP aged 18 to 30.

You will be taking part in a focus group (once off, max 60 minutes).

Researchers want to understand the health information seeking behaviours of young people with CP from a clinical point of view, and to gain insights on how you support this group's health information seeking behaviours.
