

# AusACPDM Listening and Sharing session

## “The PREMTiME Study – implications for early targeted surveillance of very preterm infants”

Join us in our free listening and sharing session

**Wednesday May 28<sup>th</sup> 4:30pm Australian EST**

*The PREMTiME study is a collaboration between the Sunshine Coast Hospital and Health Service and the University of Queensland that aims to deliver family centred, cost effective and clinically efficient follow-up services for very preterm born and very low birthweight infants. Outcomes of the first phase of the study identified new biomarkers that may help clinicians make very early and accurate predictions about outcomes in children who are born very preterm or with very low birthweight. This session is relevant for families with children impacted by preterm birth and health care professionals working in acute neonatal developmental care and neonatal neurodevelopmental follow up services.*

***Speaker: Dr Rebecca Caesar PhD (Clinical Lead Paediatric Physiotherapy, Women's and Children's Service, Sunshine Coast Hospital and Health Service)***

The aim of our AusACPDM Listening and sharing sessions is to share knowledge, experiences and learnings. These are held via zoom, and open to everyone (but registration numbers are limited). Recordings of some of our sessions will be made available at a later date within the members only section of the AusACPDM website.
